

Reproducibility report for: Title of the submission being evaluated.

Submitted to: Name of Journal

Manuscript identifier: Journal-identifier

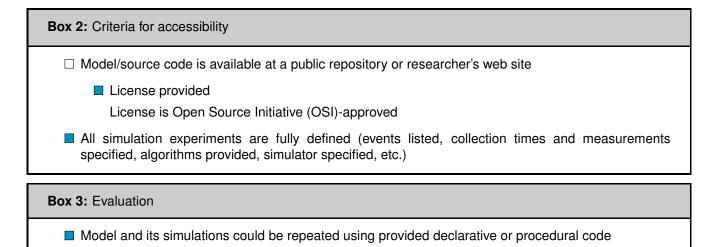

Curation outcome summary: One or two sentences summarizing the outcome of the curation report.

Box 1: Criteria for repeatability and reproducibility
■ Model source code provided:
Source code: a standard procedural language is used (e.g. MATLAB, Python, C)
 There are details/documentation on how the source code was compiled There are details on how to run the code in the provided documentation The initial conditions are provided for each of the simulations
$\ \square$ Details for creating reported graphical results from the simulation results
☐ Source code: a declarative language is used (e.g. SBML, CellML, NeuroML)
 The algorithms used are defined or cited in previous articles The algorithm parameters are defined Post-processing of the results are described in sufficient detail
Executable model provided:
$\hfill\Box$ The model is executable without source (e.g. desktop application, compiled code, online service)
There are sufficient details to repeat the required simulation experiments
■ The model is described mathematically in the article(s):
☐ Equations representing the biological system
■ There are tables or lists of parameter values
☐ There are tables or lists of initial conditions
Machine-readable tables of parameter values
■ Machine-readable tables of initial conditions
\Box The simulation experiments using the model are described mathematically in the article:
Integration algorithms used are defined
☐ Stochastic algorithms used are defined
Random number generator algorithms used are defined
Parameter fitting algorithms are defined
$\hfill\Box$ The paper indicates how the algorithms yield the desired output

CRBM Reproducibility Report version 1.3

☐ Model and its simulations could be reproduced

CRBM Reproducibility Report version 1.3
